Preface & Acknowledgement

1. What are chemicals?

1.1	Definitions	6
1.2	The Role of Chemicals in Everyday Life	6

Think if the matter could "go back" to how it originally was. If it cannot, then it's a chemical change.

The Nuclear Regulatory Commission

Human beings probably began combining chemicals before recorded history.

1.1 Definitions

In everyday usage, a "chemical" often refers to a specific substance, and is the core concept of chemistry.

chemistry, the science that deals with the properties, composition, and structure of substances (defined as elements and compounds), the transformations they undergo, and the energy that is released or absorbed during these processes.

1.2 The Role of Chemicals in Everyday Life

In fact, chemicals make up all of our foods as well as the air we breathe.

2. What is Breathing ?

2.1	Definitions	7
2.2	Importance of Breathing	7

Every breath you take proves just how blessed you really are.

John Landry

When you breathe in, or inhale, your diaphragm contracts and moves downward. This increases the space in your chest cavity, and your lungs expand into it. The muscles between your ribs also help enlarge the chest cavity. They contract to pull your rib cage both upward and outward when you inhale.

2.1 Definitions

Breathing is the art of exchanging air, oxygen, and/or carbon dioxide with the environment.

2.2 Importance of Breathing

Breathing is important because it has various benefits, including¹²³:

- Reducing chronic stress
- Slowing the heartbeat
- Lowering or stabilizing blood pressure
- Improving focus and concentration
- Enhancing emotional regulation
- Promoting better sleep
- Enhancing lung function
- Managing pain
- Improving digestion.

3. Perfums and Deodorants

3.1	Perfumes	8
3.2	Deodorants	8
3.3	Fragrances	8
3.4	The laundry experience: the Perfum Society	9

Perfume is magic. It's mystery. We recreate the smell of a flower.

M.J. Rose

The precise formulae of commercial perfumes are kept secret. Even if they were widely published, they would be dominated by such complex ingredients and odorants that they would be of little use in providing a guide to the general consumer in description of the experience of a scent.

3.1 Perfumes

Many perfumes are made by extracting scented oil from natural ingredients. These ingredients can include various plants, fruits, woods and even animal secretions. Other resources like alcohol, coal, tars and petrochemicals can be used during the manufacturing process to create perfume oil.

3.2 Deodorants

Deodorants are a core group of cosmetic active solutions when studying the biochemistry of human body odour formation[4],[5]. The quest for deodorants is qualified as the quest for godhood or godliness [2].

These sweat acids are secreted in the axilla in the form of odorless glutamine conjugates and are released upon enzymolysis by AMRE (Axillary Malodor Releasing Enzyme), produced by Corynebacteria[3].

3.3 Fragrances

Fragrances have captivated our senses for centuries, offering a delightful world of olfactory experiences. Yet, the terms "fragrance" and "perfume" are often used interchangeably, creating confusion among scent enthusiasts.

3.4 The laundry experience: the Perfum Society

4. Skyscraper or Gratte-Ciels

4.1	Skyscrapers Architecture	10
4.2	History & Inspirational facts	10
4.3	The future of Skyscrapers & Legendary Buildings	10

Skyscrapers remind us that we can conquer the challenges of gravity and reach new heights.

Anonymous

Skyscrapers are the sculptures of the urban landscape. If you secure an apartment on the upper floor of skyscrapers, you'll enjoy less traffic noise and some of the best views in the city. Living on higher floors also gives you more privacy, natural light, and fresh air. Skyscrapers will provide vast views of the city skyline, which will help calm your mind and helps to stimulate your health and senses[1].

4.1	Skyscrapers Architecture
4.2	History & Inspirational facts
4.3	The future of Skyscrapers & Legendary Buildings

5. Parcs, BioTech Labs, Chemicals labs, and More

Live in the serene peace of laboratories and libraries Louis Pasteur.

M.J. Rose

Eating healthy is the key to prolong longevity. Thanks to biotechnology that has enabled scientists to cut trans fat from vegetable oils.

5.1 Parcs

5.2 BioTech Labs

5.3 Chemicals labs

6. Supranormal

6.1	Definitions	12
6.2	History	12
6.3	Living in the sea, Military life on Oceans in submarines, boats, and croisaries	12
6.4	Special Homeless experiences in cities	12
6.5	Those who live in Hospital residences	13
6.6	Commercial Centers with diverse Perfums Shops	13
6.7	Living in Space, Spaces Programs: Virgin Space Program, NASA, Elon Musk Starlink and SpaceX Programs	13

Paranormal events are just edges of the infinite we 'happen' to encounter.

C. Douglas Dillon

Paranormal refers to phenomena, experiences or events that cannot be explained by established scientific laws or principles. These can include various forms of supernatural activity like ghosts, psychic abilities, extrasensory perception (ESP), UFO sightings, telepathy, telekinesis, and life after death, among others. The term paranormal is often used interchangeably with terms like supernatural and unexplained phenomena. [ChatGPT]

6.1 Definitions

For example, in some birds incubation behaviour is stimulated by the presence of an egg, and the larger the egg the stronger the stimulus; in such birds a very large artificial egg may be incubated in preference to a much smaller real egg.

6.2 History

In the late 1940s, two great scientists, Nobel Prize winner Konrad Lorenz, an Austrian zoologist, and Dutch biologist Nikolaas "Niko" Tinbergen, co-founders of the field of ethology (behavioral biology), became interested in how instinct works.

Their experiments revealed something unexpected: instincts, which had evolved to help animals live better lives, could be manipulated in the laboratory.

6.3 Living in the sea, Military life on Oceans in submarines, boats, and croisaries

6.4 Special Homeless experiences in cities

6.5 Those who live in Hospital residences

6.6 Commercial Centers with diverse Perfums Shops

6.7 Living in Space, Spaces Programs: Virgin Space Program, NASA, Elon Musk Starlink and SpaceX Programs
